

Technical Training

Training and professional development is crucial to successfully building a team of knowledgeable, proactive and innovative geoscientists who can effectively generate and test geological targets.

SRK ES provides multidisciplinary guidance on a broad spectrum of topics and skills, collaborating with client's technical teams to solve onsite problems and help develop their in-house capabilities. SRK ES can assist staff in becoming more familiar with internationally recognised standards and industry best practice guidelines, provide training of new staff in field skills or the development of the team in a specialist area of expertise.

SRK ES offers:

Highly skilled geologists experienced in working for independent consultancies, exploration and mining companies and academic institutions. SRK ES provide project and task specific coaching to technical staff who are undertaking exploration activities. This often involves SRK ES geologists working onsite with the client's team before letting the project run independently with occasional remote support.

Knowledge of teaching and instructional methods that can be tailored to any audience or location. SRK ES can assess management styles and advise clients on how to improve the efficiency of their exploration projects by the selection of the most suitable technical staff and proper management of resources, schedules and budgets.

Expertise in field techniques such as recording structural measurements, operating geophysical surveying equipment, sampling procedures, specialised three dimensional geological modelling software, interpretation of geochemical and geophysical datasets and comprehensive geological and geotechnical logging of drill core.

Onsite instruction and training as part of practical sessions in the field or at the client's offices, remote support and assistance via phone and email, or training at one of SRK ES' offices if appropriate. These sessions are designed to encourage the client's teams to become confident, responsible and independent in their work.

SRK ES has the experience necessary to assist in optimising geological teams, through training, remote assistance and developing effective management styles. Exploration companies can be assured that their geologists are forward thinking, skillful and decisive in identifying potential mineral deposits whilst working safely and efficiently. After all, good geologists are an exploration company's greatest asset!
